There is a need to determine with high accuracy the surface quality of objects in a closed space. Measurements of surface quality are particularly important for objects having sharp edges, such as semiconductor wafers. In order to detect such defects, a particularly sensitive method is disclosed in U.S. Pat. No. 4,888,469 in which, prior to wafer slicing, a replica of the wafer surface is produced. Using an interferometric method, the surface of the wafer replica is scanned, and the surface quality of the wafer is determined based on the result of scanning. A drawback of this method is that the wafer has to be disposed in a controlled environment, so that the environment around the wafer has to be constant.Q: Vue: Error: "TypeError: Cannot read property 'props' of undefined" i'm trying to learn vuejs and i'm trying to follow the video tutorial here: at 13
