The following table shows the new and changed modules in the shipped (active) configuration. A module is new or changed when it is active in the shipped configuration but not in the active configuration. The following table shows the new and changed modules in the missing configuration. A module is new or changed when it is missing in the shipped configuration but present in the active configuration. A new module has been marked as superseded. To continue to use the old module with the new replacement, click the superseded module's check box. Redistribution of the Microsoft Windows SDK is subject to the terms and conditions of Microsoft. You may not install or use it on a device intended for distribution. This also means that you cannot use the SDK to generate a Windows Store app that will run on an ARM-based system. As such, this SDK is only available to developers who want to create Windows Store apps that will run on an ARM-based system. Two critical fixes were included in this update: A new driver for a chipset known as Intel Wi-Fi Link 5200 can fix a networking issue with some laptops that are shipped with the device. The other critical fix is in the Windows Error Reporting service that was introduced in Windows Vista. This update fixes a problem where the service would crash when it received a network error report. Both critical fixes are included in this update. For more information about the problems fixed by these updates, see the articles listed in the Microsoft Knowledge Base. See the Microsoft website for more details about how to obtain this update. To obtain the update, select the appropriate language from the drop-down list below and then click View or Download button. Note: Some of the features and benefits described in this section may not apply to certain editions of Windows. Some features may be specific to Home or Professional versions of Windows or may require additional hardware. For example, Windows Media Player 11 requires a high-definition video card. For the complete list of features and benefits, see Windows 10.
