Productivity is the most important criterion for any tool used in production. One of the goals of the Team/Project C-ART was to improve the productivity of the entire team. To achieve this goal, the project manager can get information about the status of the individual teams in the project from the software. When dealing with a large number of work items, a user may be interested in an overall view of the work-flow in the project. A project manager can use a central repository for work items (called a Work Item Tracking System, or WITS) to track and manage all items and work. This guide will cover the basics and common tasks when working with a WITS. In addition to ArtCAM, ArtCAD is a third-party add-in for ArtCAM which provides functionality for the Locate, Text, Rotate, and Save/Recover commands in the Sketch component of the ArtCAM product. If you are not using ArtCAM, this add-in will be very valuable to you. For information about additional ArtCAM add-ins, see: ArtCAM is integrated with Autodesk 3D Studio. Autodesk 3D Studio allows you to work in 3D and also provides 2D drawing tools. Using Autodesk 3D Studio, you can import
