A: The Epson 1020 is a thermal printer, not a color inkjet. In a thermal printer, the printhead never heats up to the point of burning the paper. Instead, tiny dots of ink are deposited by tiny microscopic (0.001 mm) openings in the printhead. The Epson's printhead, as shown in the section below, has more than 23,000 such tiny openings. (I have a similar printer, and it has far fewer such tiny holes.) The holes are very small, but they have a diameter of 0.0025 mm. The openings are filled with black ink. Thus the paper looks black. The tiny dots give the illusion of text. The dots don't need to be high quality, as long as they are wide enough. Your Epson is a thermal printer, not an inkjet. The tiny dots look like black lines on a white paper, but the paper only looks white because it's coated with white pigment. If you look closely, you can see it's actually a white page on a black background. If you have a Canon printer with black ink (Canon MX870), you can put a copy of this page over it and it will print out your Epson black dots on your black ink page. (If you have a different color inkjet, it will print out the dots, but since there's no yellow, it will look dull.) This is why you can print out a white sheet of paper with a color inkjet printer. Since the black dots on a white sheet look like a sheet of paper, people think it's a paper copy. I'm assuming your Epson 1020 is model 730 because the image you showed above is from that model. All Epson thermal printers have two ratings: dot resolution and print speed. The dot resolution is the number of dots per inch, and the print speed is how many pages per minute the printer can print. The dot resolution is given as "for monochrome" or "for color" and for the most part, the two ratings are the same. However, you'll have to check the Epson manual to find the specific dot resolution rating. You can usually determine the rating from the printer's serial number. Serial numbers are usually printed in a bright blue or red font on the bottom or top of the printer. For example, my Epson 1020 2d92ce491b
