

---

file, and prints that data out in a tkinter window. When I press the 'Go' button, I would like to run a function that 'checks' if there is an error in the text file and then prints out 'there is an error' and the filename. This is the code for the check function: `def check_error(textfile): with open(textfile) as f: for line in f: if any(x for x in line if x.isdigit()) == False: print('there is an error in the file {}'.format(textfile))` When the program checks the file it prints out all the lines in the file, and I'm not sure why it does this. This is the function that prints out the file: `def print_txt(textfile): with open(textfile) as f: for line in f: print(line.rstrip())` Any help is appreciated, thanks. 2d92ce491b
